TWIST&FIT
ROLLER/ROMAN/WOODEN BLIND

LET'S GET
MEASURING!

MEASURING FOR TWIST&FIT BLINDS

Using a metal tape measure and a pen/pencil, follow our simple step-by-step guide.

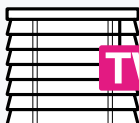

THIS MEASURING GUIDE IS SUITABLE FOR:

TWIST&FIT ROLLER BLINDS

TWIST&FIT ROMAN BLINDS

TWIST&FIT WOODEN BLINDS

Blind components can vary in size, and to ensure proper installation, there will typically be a small gap around the sides of the blind and its fittings. This gap allows the blind to operate smoothly within the recess or mounting space.

ROLLER BLINDS

The fabric on a roller blind is usually 3.5 to 4 cm narrower than the full width of the mechanism, including the brackets and controls. This ensures the fabric rolls up cleanly without catching on the sides.

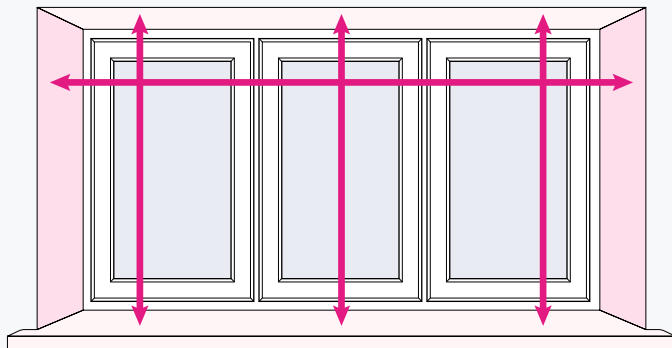

ROMAN BLINDS

Roman blind fabric is generally 0.5 to 1 cm narrower than the width of the window. This allows for smooth raising and lowering without obstruction.

WOODEN (VENETIAN) BLINDS:

Wooden blinds have a very minimal difference in width of the slats vs the Twist&Fit headrail and fittings. We only deduct 10mm off a recess for the slats.

Measure the area where your blind will be installed within the window opening, this is usually as close to the window glass as possible. Ensure you measure to the nearest mm for the best possible fit.

STEP 1 - MEASURING WIDTH

Measure the width at the top of the recess. This will be your blind width.

STEP 2 - MEASURING DROP

Take **3 measurements** from the top down, along the left, middle and right of the recess. The **smallest** measurement will be your blind drop.

TIP: When measuring, be aware of anything that may get in the way, such as tiling or picture rails. For roller blinds, if the difference at this point is 20mm or less compared to the width where you intend to fit, you must provide the fitting location as your measurement.

For all other blinds, the gap varies from 0.7cm to 1.5cm available gap. If you are unsure – contact our customer services team.

THAT'S IT! These 2 measurements are all you need for ordering this blind.
